

ILINX ADVANCED REPORT MANAGEMENT (ARM)

Maximize and leverage the value of your enterprise data locked up inside static COLD/ERM reports and print streams.

Robust and highly configurable, ILINX ARM utilizes advanced parsing and data extraction to efficiently burst COLD reports into smaller individual, graphically accurate documents, then deliver them to your ECM repository along with detailed metadata. In addition to being immediately accessible, the resulting documents are much easier to manage and distribute. Detailed data extracted from the content can support data mining capabilities that are impossible with the raw reports.

CLEANLY INTEGRATES WITH ECM REPOSITORIES

- › Oracle WebCenter Content 11g
- › ILINX Content Store

SETUP & CONFIGURATION

- › Microsoft Windows OS

PRODUCTION & BATCH PROCESSING ON:

- › Linux
- › Solaris
- › AIX

Business Benefits

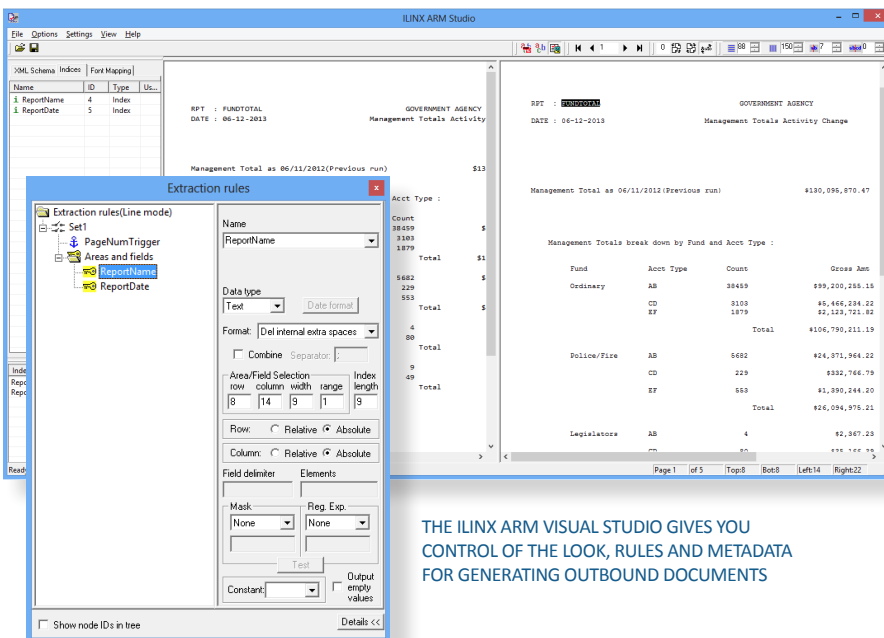

- › Robust architecture ensures scalability to meet even the highest ERM report and print stream volumes
- › Highly configurable interface eliminates the need for multiple custom preprocessors
- › With desktop access to all report information, reduces labor and cost for paper printing, courier, and distribution
- › Enables a competitive advantage by improving customer service through rapid accessibility, response times and self-service
- › Delivers the most powerful, yet easy-to use administration functionality
- › Powerful, integrated suite of tools designed to provide accessibility to documents for:
 - › Service bureaus
 - › Application service providers
 - › Electronic Bill Presentment and Payment (EBPP)
 - › Content management
 - › Archiving/COLD storage
 - › Print management

Product Capabilities

- › Output is highly configurable and is written to the file system for consumption by any system
- › Preview input data streams & indexing set up rules
- › Supports font mapping and document breaking
- › Generate custom XML documents
- › Perform electronic document conversion
- › Sophisticated extraction rules and expression processing including relative position logic
- › Modern studio for designing extraction processing
- › Supports ASCII text and 11 other input formats, including: IBM, AFP, Xerox Metacode, PCL, PostScript, PDF
- › Automated processing can generate 3 types of output formats: TIFF, PDF & XML
- › Unlimited overlay/watermark support, including applying different overlays to various pages in a single document

Product Modules

- › **ARM Job Setup**
Sets processing directives for data stream conversion & manages resources in one easy step
- › **ARM Visual Studio**
An integrated development environment used to visualize print data streams, map fonts in real time, and create rules for extracting document metadata and generating outbound documents
- › **ARM Transforms/Extracts**
Engine that converts COLD/ERM data streams into PDF, TIFF, XML or text
- › **ARM Viewer**
Previews the incoming data stream to ensure that visual fidelity is just the way you want it
- › **Advanced Font Mapper**
Correlate fonts so that typefaces in your electronic documents render with precision

THE ILINX ARM VISUAL STUDIO GIVES YOU CONTROL OF THE LOOK, RULES AND METADATA FOR GENERATING OUTBOUND DOCUMENTS
