

Deliver data from ILINX Capture to ECM software with numerous options.

ILINX[®] Release provides a function-rich tool that takes any type of content processed through ILINX Capture and delivers it to a variety of ECM systems with full auditing and logging capabilities. This proven and easy-to-configure technology is scalable to serve individual business units or the whole enterprise.

Benefits & Features

Easily Configure & Process

- › Configured anywhere via browser-based tools
- › Centralized web-based configuration and management
- › Highly scalable server architecture
- › Built on Microsoft .NET framework
- › Easy to use interface allows configuration between ILINX Capture and target storage systems
- › Standardize your content delivery into PDF, TIFF, etc regardless of how the originals were received
- › Ability to release any document types
- › Option to append to an existing document, or the option to always create separate documents based on targeted system

Workflow Configuration

- › Auto-index mapping tool makes it easy to graphically map index information from the source system's index fields with the target system's index fields
- › Complete control over when, where, and in what format information is delivered out of workflow to other systems
- › Multiple delivery destinations at any point in the business process
- › Database auditing capabilities for document reconciliation and complete delivery tracking

Diagnostic Capabilities

- › Notify personnel when system problems are encountered during ILINX Release processing
- › Comprehensive debug & exception logging capabilities to help IT staff track down & solve system problems

Multiple targeted systems

- › File System (Index File)
- › File System (XML Template File)
- › ILINX Content Store
- › Oracle IPM 10gR3
- › Oracle WebCenter Content 11g
- › Oracle WebCenter Content Imaging 11g
- › Microsoft Sharepoint
- › IBM FileNet P8
- › EMC AppXtender
- › Kofax Capture
- › Onbase Director

Document Types Supported

- › Group IV, multi-page TIFF
- › PDF
- › JPG
- › Native electronic document release formats (Word, Excel, etc.)

Choose the specific target document type the documents and data will be released to

The screenshot shows a configuration window for ILINX Release. At the top, 'Source document type' is set to 'Receivable'. Below, 'Target document type settings' shows 'Target document type' set to 'Accounts Payable'. A 'Field mapping' table is displayed with columns for 'Target index fields - Accounts Payable' and 'Source index fields - Receivable'. The 'Invoice Amount' row is highlighted in blue, and a blue box highlights the dropdown menu for 'Document/Invoice Amount' in the source column. A dotted line points from the text 'Auto map index values with the target systems' to this dropdown menu. At the bottom of the window are 'OK' and 'Cancel' buttons, and an 'Edit additional settings...' button.

Target index fields - Accounts Payable	Source index fields - Receivable	
Vendor Name	Document/Vendor Name	<input type="checkbox"/>
Date	Document/Date	<input type="checkbox"/>
Invoice Number	Document/Invoice Number	<input type="checkbox"/>
Invoice Amount	Document/Invoice Amount	<input checked="" type="checkbox"/>
ICS_CreatedByUserName		<input type="checkbox"/>
ICS_EnteredDate		<input type="checkbox"/>

Auto map index values with the target systems
